**Edexcel GCE**

**Statistics S1**

**Advanced/Advanced Subsidiary**

**Tuesday 10 June 2014 – Morning**

**Time: 1 hour 30 minutes**

**Materials required for examination**

Mathematical Formulae (Pink)

**Items included with question papers**

Nil

**Candidates may use any calculator allowed by the regulations of the Joint Council for Qualifications. Calculators must not have the facility for symbolic algebra manipulation, differentiation and integration, or have retrievable mathematical formulas stored in them.**

**Instructions to Candidates**

---

In the boxes on the answer book, write the name of the examining body (Edexcel), your centre number, candidate number, the unit title (Statistics S1), the paper reference (6683), your surname, other name and signature.

Values from the statistical tables should be quoted in full. When a calculator is used, the answer should be given to an appropriate degree of accuracy.

**Information for Candidates**

---

A booklet 'Mathematical Formulae and Statistical Tables' is provided.

Full marks may be obtained for answers to ALL questions.

This paper has 8 questions.

The total mark for this paper is 75.

**Advice to Candidates**

---

You must ensure that your answers to parts of questions are clearly labelled.

You must show sufficient working to make your methods clear to the Examiner.

Answers without working may not gain full credit.

1. A random sample of 35 homeowners was taken from each of the villages Greenslax and Penville and their ages were recorded. The results are summarised in the back-to-back stem and leaf diagram below.

Totals		Greenslax							Penville									Totals			
(2)						8	7	2	5	5	6	7	8	8	9			(7)			
(3)						9	8	7	3	1	1	1	2	3	4	4	5	6	7	9	(11)
(4)						4	4	4	0	4	0	1	2	4	7						(5)
(5)						6	6	5	2	2	5	0	0	5	5	5					(5)
(7)		8	6	5	4	2	1	1	6	2	5	6	6								(4)
(8)	8	6	6	6	4	3	1	1	7	0	5										(2)
(5)						9	8	4	3	2	8										(0)
(1)								4	9	9											(1)

Key: 7 | 3 | 1 means 37 years for Greenslax and 31 years for Penville

Some of the quartiles for these two distributions are given in the table below.

	Greenslax	Penville
Lower quartile, $Q_1$	$a$	31
Median, $Q_2$	64	39
Upper quartile, $Q_3$	$b$	55

- (a) Find the value of  $a$  and the value of  $b$ .

(2)

An outlier is a value that falls either

more than  $1.5 \times (Q_3 - Q_1)$  above  $Q_3$

or more than  $1.5 \times (Q_3 - Q_1)$  below  $Q_1$

- (b) On the graph paper on the next page draw a box plot to represent the data from Penville. Show clearly any outliers.

(4)

- (c) State the skewness of each distribution. Justify your answers.

(3)

Question 1(b) graph paper

- 
2. The mark,  $x$ , scored by each student who sat a statistics examination is coded using

$$y = 1.4x - 20$$

The coded marks have mean 60.8 and standard deviation 6.60.

Find the mean and the standard deviation of  $x$ .

**(4)**

---

3. The table shows data on the number of visitors to the UK in a month,  $v$  (1000s), and the amount of money they spent,  $m$  (£ millions), for each of 8 months.

Number of visitors $v$ (1000s)	2450	2480	2540	2420	2350	2290	2400	2460
Amount of money spent $m$ (£ millions)	1370	1350	1400	1330	1270	1210	1330	1350

You may use

$$S_{vv} = 42587.5 \quad S_{vm} = 31512.5 \quad S_{mm} = 25187.5 \quad \Sigma v = 19390 \quad \Sigma m = 10610$$

- (a) Find the product moment correlation coefficient between  $m$  and  $v$ . (2)
- (b) Give a reason to support fitting a regression model of the form  $m = a + bv$  to these data. (1)
- (c) Find the value of  $b$  correct to 3 decimal places. (2)
- (d) Find the equation of the regression line of  $m$  on  $v$ . (2)
- (e) Interpret your value of  $b$ . (2)
- (f) Use your answer to part (d) to estimate the amount of money spent when the number of visitors to the UK in a month is 2 500 000. (2)
- (g) Comment on the reliability of your estimate in part (f). Give a reason for your answer. (2)
-

4. In a factory, three machines,  $J$ ,  $K$  and  $L$ , are used to make biscuits.

Machine  $J$  makes 25% of the biscuits.

Machine  $K$  makes 45% of the biscuits.

The rest of the biscuits are made by machine  $L$ .

It is known that 2% of the biscuits made by machine  $J$  are broken, 3% of the biscuits made by machine  $K$  are broken and 5% of the biscuits made by machine  $L$  are broken.

- (a) Draw a tree diagram to illustrate all the possible outcomes and associated probabilities. (2)

A biscuit is selected at random.

- (b) Calculate the probability that the biscuit is made by machine  $J$  and is not broken. (2)

- (c) Calculate the probability that the biscuit is broken. (2)

- (d) Given that the biscuit is broken, find the probability that it was not made by machine  $K$ . (3)
- 

5. The discrete random variable  $X$  has the probability function

$$P(X = x) = \begin{cases} kx & x = 2, 4, 6 \\ k(x - 2) & x = 8 \\ 0 & \text{otherwise} \end{cases}$$

where  $k$  is a constant.

- (a) Show that  $k = \frac{1}{18}$ . (2)

- (b) Find the exact value of  $F(5)$ . (1)

- (c) Find the exact value of  $E(X)$ . (2)

- (d) Find the exact value of  $E(X^2)$ . (2)

- (e) Calculate  $\text{Var}(3 - 4X)$  giving your answer to 3 significant figures. (3)
-

6. The times, in seconds, spent in a queue at a supermarket by 85 randomly selected customers, are summarised in the table below.

Time (seconds)	Number of customers, $f$
0 – 30	2
30 – 60	10
60 – 70	17
70 – 80	25
80 – 100	25
100 – 150	6

A histogram was drawn to represent these data. The 30 – 60 group was represented by a bar of width 1.5 cm and height 1 cm.

- (a) Find the width and the height of the 70 – 80 group. (3)
- (b) Use linear interpolation to estimate the median of this distribution. (2)

Given that  $x$  denotes the midpoint of each group in the table and

$$\sum fx = 6460 \quad \sum fx^2 = 529\,400$$

- (c) calculate an estimate for
- (i) the mean,
- (ii) the standard deviation,
- for the above data. (3)

One measure of skewness is given by

$$\text{coefficient of skewness} = \frac{3(\text{mean} - \text{median})}{\text{standard deviation}}$$

- (d) Evaluate this coefficient and comment on the skewness of these data. (3)
-

7. The heights of adult females are normally distributed with mean 160 cm and standard deviation 8 cm.

(a) Find the probability that a randomly selected adult female has a height greater than 170 cm. (3)

Any adult female whose height is greater than 170 cm is defined as tall.

An adult female is chosen at random. Given that she is tall,

(b) find the probability that she has a height greater than 180 cm. (4)

Half of tall adult females have a height greater than  $h$  cm.

(c) Find the value of  $h$ . (5)

---

8. For the events  $A$  and  $B$ ,

$$P(A' \cap B) = 0.22 \quad \text{and} \quad P(A' \cap B') = 0.18$$

(a) Find  $P(A)$ . (1)

(b) Find  $P(A \cup B)$ . (1)

Given that  $P(A | B) = 0.6$ ,

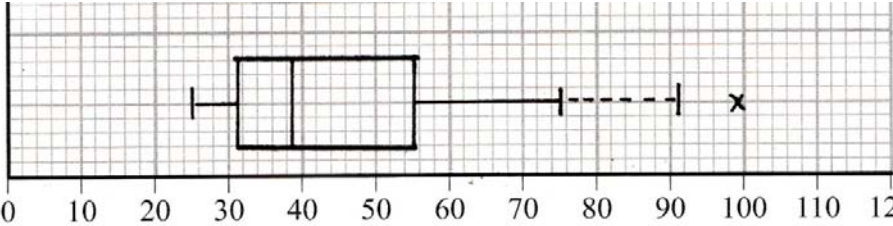

(c) find  $P(A \cap B)$ . (3)

(d) Determine whether or not  $A$  and  $B$  are independent. (2)

---

**TOTAL FOR PAPER: 75 MARKS**

**END**

Question Number	Scheme		Marks
1. (a)	$a = 44$ $b = 76$	These answers may be in or near the table	B1 B1 (2)
(b)	$55 + 1.5(55 - 31) = 91$ [and $31 - 1.5(55 - 31) = -5$ ] <b>Penville</b> 		M1 B1 B1 A1 (4)
(c)	Greenslax : $[Q_2 - Q_1 = 20, Q_3 - Q_2 = 12 \text{ or } (Q_2 - Q_1) > (Q_3 - Q_2)] \Rightarrow -\text{ve}(\text{skew})$ Penville: $[Q_2 - Q_1 = 8, Q_3 - Q_2 = 16 \text{ or } (Q_3 - Q_2) > (Q_2 - Q_1)] \Rightarrow +\text{ve}(\text{skew})$ Don't insist on seeing "skew" so just -ve and +ve will do. Treat "correlation" as ISW Justification that is consistent		B1 B1 ddB1 (3) <b>Total 9</b>
	Notes		
(b)	<b>A fully correct box plot scores 4/4. If <u>not</u> fully correct apply scheme and need evidence for M1</b> <b>If two box plots are seen ignore the one for Greenslax. If not on graph paper M1 max for (b)</b> M1 for sight of $55 + 1.5(55 - 31)$ <u>or</u> 91 seen (possibly implied by RH whisker of box plot) May be implied by a fully correct box plot 1 <sup>st</sup> B1 box with whiskers (condone missing median) 2 <sup>nd</sup> B1 25, 31, 39, 55, RH whisker to end at 75 or 91. Two RH whiskers is B0 Accuracy must be to within 0.5 of a square so e.g. lower quartile at 30 or 32 is OK		
(c)	A1 only one outlier plotted at 99. Allow cross to be vertically displaced If the RH whisker goes to 99 (2 <sup>nd</sup> B0) <u>and</u> A0 even if outlier is identified since we require a horizontal "gap" between RH whisker and outlier. 1 <sup>st</sup> B1 Greenslax - ve (skew)   We must be able to tell which is which but labels may be implied by their <u>values</u> but not simply from $Q_3 - Q_2 > Q_2 - Q_1$ 2 <sup>nd</sup> B1 Penville + ve (skew).   If there is just <u>one</u> , unlabelled comment assume Penville. 3 <sup>rd</sup> ddB1 dependent on 1 <sup>st</sup> and 2 <sup>nd</sup> B marks being scored. Justification for <u>both</u> based on: quartiles, median relative to quartiles, or "tail" If only values for $Q_3 - Q_2$ etc are <u>given</u> they should be correct fit for Greenslax and correct for Penville If values for Greenslax imply +ve skew then 1 <sup>st</sup> B0 and 3 <sup>rd</sup> B0
