<u>Materials required for examination</u> Mathematical Formulae (Pink or Green) **Items included with question papers** Nil

Candidates may use any calculator allowed by the regulations of the Joint Council for Qualifications. Calculators must not have the facility for symbolic algebra manipulation, differentiation or integration, or have retrievable mathematical formulae stored in them.

Instructions to Candidates

Write the name of the examining body (Edexcel), your centre number, candidate number, the unit title (Core Mathematics C2), the paper reference (6664), your surname, initials and signature.

Information for Candidates

A booklet 'Mathematical Formulae and Statistical Tables' is provided. Full marks may be obtained for answers to ALL questions. The marks for the parts of questions are shown in round brackets, e.g. (2). There are 9 questions in this question paper. The total mark for this paper is 75.

Advice to Candidates

You must ensure that your answers to parts of questions are clearly labelled. You must show sufficient working to make your methods clear to the Examiner. Answers without working may not gain full credit.

N35101A This publication may only be reproduced in accordance with Edexcel Limited copyright policy. ©2010 Edexcel Limited. 1. Find the first 3 terms, in ascending powers of x, of the binomial expansion of

 $(3-x)^{6}$

and simplify each term.

2. (*a*) Show that the equation

 $5 \sin x = 1 + 2 \cos^2 x$ $2 \sin^2 x + 5 \sin x - 3 = 0.$ (2)

(*b*) Solve, for $0 \le x < 360^\circ$,

can be written in the form

$$2\sin^2 x + 5\sin x - 3 = 0.$$

3.

$$f(x) = 2x^3 + ax^2 + bx - 6,$$

where *a* and *b* are constants.

When f(x) is divided by (2x - 1) the remainder is -5. When f(x) is divided by (x + 2) there is no remainder.

(*a*) Find the value of *a* and the value of *b*.

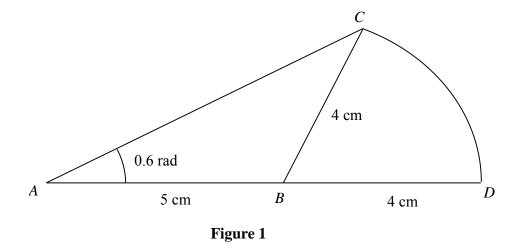

- - (b) Factorise f(x) completely.

An emblem, as shown in Figure 1, consists of a triangle *ABC* joined to a sector *CBD* of a circle with radius 4 cm and centre *B*. The points *A*, *B* and *D* lie on a straight line with AB = 5 cm and BD = 4 cm. Angle BAC = 0.6 radians and *AC* is the longest side of the triangle *ABC*.

(a) Show that angle ABC = 1.76 radians, correct to three significant figures.

(b) Find the area of the emblem.

5. (a) Find the positive value of x such that

 $\log_x 64 = 2.$

(b) Solve for x

$$\log_2(11 - 6x) = 2 \log_2(x - 1) + 3.$$

(6)

6. A car was purchased for £18 000 on 1st January.

On 1st January each following year, the value of the car is 80% of its value on 1st January in the previous year.

(a) Show that the value of the car exactly 3 years after it was purchased is £9216.

(1)

The value of the car falls below £1000 for the first time n years after it was purchased.

(*b*) Find the value of *n*.

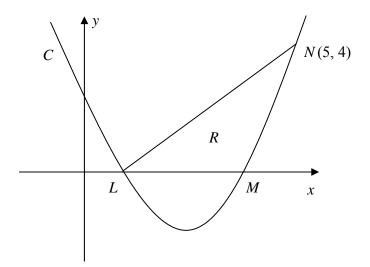

(3)

An insurance company has a scheme to cover the cost of maintenance of the car. The cost is $\pounds 200$ for the first year, and for every following year the cost increases by 12% so that for the 3rd year the cost of the scheme is $\pounds 250.88$.

(c) Find the cost of the scheme for the 5th year, giving your answer to the nearest penny.

(2)

(*d*) Find the total cost of the insurance scheme for the first 15 years.

The curve C has equation $y = x^2 - 5x + 4$. It cuts the x-axis at the points L and M as shown in Figure 2.

- (*a*) Find the coordinates of the point *L* and the point *M*.
- (b) Show that the point N(5, 4) lies on C.

(c) Find
$$\int (x^2 - 5x + 4) dx$$
. (2)

The finite region *R* is bounded by *LN*, *LM* and the curve *C* as shown in Figure 2.

(d) Use your answer to part (c) to find the exact value of the area of R.

(5)

(2)

(1)

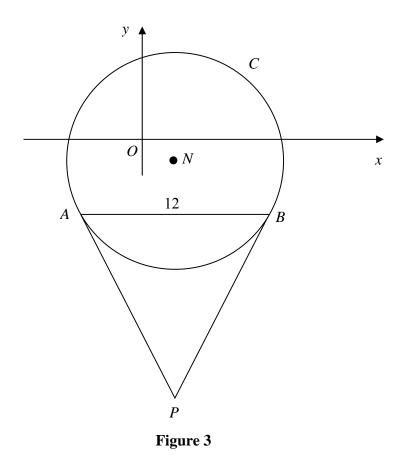

Figure 3 shows a sketch of the circle C with centre N and equation

$$(x-2)^2 + (y+1)^2 = \frac{169}{4}.$$

(a) Write down the coordinates of N.

(*b*) Find the radius of *C*.

8.

The chord AB of C is parallel to the x-axis, lies below the x-axis and is of length 12 units as shown in Figure 3.

(c) Find the coordinates of A and the coordinates of B.
(d) Show that angle ANB = 134.8°, to the nearest 0.1 of a degree.

The tangents to *C* at the points *A* and *B* meet at the point *P*.

(e) Find the length AP, giving your answer to 3 significant figures.

(2)

(1)

(2)

- 9. The curve *C* has equation $y = 12\sqrt{x} x^{\frac{3}{2}} 10$, x > 0.
 - (a) Use calculus to find the coordinates of the turning point on C.

(b) Find
$$\frac{d^2 y}{dx^2}$$
. (2)

(c) State the nature of the turning point.

January 2010 Core Mathematics C2 6664 Mark Scheme

Question Number	Scheme	Marks
Q1	$\left[\left(3-x \right)^{6} = \right] 3^{6} + 3^{5} \times 6 \times (-x) + 3^{4} \times \begin{pmatrix} 6 \\ 2 \end{pmatrix} \times (-x)^{2}$	M1
	$=729, -1458x, +1215x^{2}$	B1,A1, A1 [4]
Notes	M1 for <u>either</u> the <i>x</i> term <u>or</u> the x^2 term. Requires <u>correct</u> binomial coefficient in any form with the correct power of x – condone lack of negative sign and wrong power of 3. This mark may be given if no working is shown, but one of the terms including <i>x</i> is correct. Allow $\frac{6}{1}$, or $\frac{6}{2}$ (must have a power of 3, even if only power 1) First term must be 729 for B1 , (writing just 3^6 is B0) can isw if numbers added to this constant later. Can allow 729(1 Term must be simplified to $-1458x$ for A1cao . The <i>x</i> is required for this mark. Final A1 is c.a.o and needs to be $+1215x^2$ (can follow omission of negative sign in working) Descending powers of <i>x</i> would be $x^6 + 3 \times 6 \times (-x)^5 + 3^2 \times \binom{6}{4} \times (-x)^4 +$ i.e. $x^6 - 18x^5 + 135x^4 +$ This is M1B1A0A0 if completely "correct" or M1 B0A0A0 for <u>correct</u> binomial coefficient in any form with the correct power of <i>x</i> as before	
Alternative	NB Alternative method: $(3-x)^6 = 3^6(1+6\times(-\frac{x}{3})+\binom{6}{2}\times(-\frac{x}{3})^2+)$ is M1B0A0A0 – answers must be simplified to 729, -1458x, +1215x ² for full marks (awarded as before) The mistake $(3-x)^6 = 3(1-\frac{x}{3})^6 = 3(1+6\times(-\frac{x}{3})+\times\binom{6}{2}\times(-\frac{x}{3})^2+)$ may also be awarded M1B0A0A0 Another mistake $3^6(1-6x+15x^2) = 729$ would be M1B1A0A0	

Question Number	Scheme	Marks
Q2 (a)	$5\sin x = 1 + 2(1 - \sin^2 x)$	M1
	$2\sin^2 x + 5\sin x - 3 = 0$ (*)	A1cso (2)
(b)	(2s-1)(s+3) = 0 giving $s =$	M1
	$\left[\sin x = -3 \text{ has no solution}\right]$ so $\sin x = \frac{1}{2}$	A1
	$\therefore x = 30, 150$	B1, B1ft (4) [6]
(a)	M1 for a correct method to change $\cos^2 x$ into $\sin^2 x$ (must use $\cos^2 x = 1 - \sin^2 x$) A1 need 3 term quadratic printed in any order with =0 included	
(d)	M1 for attempt to solve given quadratic (usual rules for solving quadratics) (can use any variable here, <i>s</i> , <i>y</i> , <i>x</i> , or sin <i>x</i>) A1 requires no incorrect work seen and is for sin $x = \frac{1}{2}$ or $x = \sin^{-1}\frac{1}{2}$ $y = \frac{1}{2}$ is A0 (unless followed by $x = 30$) B1 for 30 (α) not dependent on method 2 nd B1 for 180 - α provided in required range (otherwise 540 - α) Extra solutions outside required range: Ignore Extra solutions inside required range: Ignore Isore in radians: Lose final B1 Answers in radians: Lose final B1 Or sin $x = \frac{1}{2}$ \therefore $x = 30$, 150 is M1A1B1B1 Just gives one answer : 30 only is M0A0B1B0 or 150 only is M0A0B0B1 NB Common error is to factorise wrongly giving $(2 \sin x + 1)(\sin x - 3) = 0$ [sin $x = 3$ gives no solution] sin $x = -\frac{1}{2}$ \Rightarrow $x = 210$, 330 This earns M1 A0 B0 B1ft Another common error is to factorise correctly $(2 \sin x - 1)(\sin x + 3) = 0$ and follow this with $\sin x = \frac{1}{2}$, sin $x = 3$ then $x = 30^{\circ}$, 150° This would be M1 A0 B1 B1
