# Paper Reference(s) 66664/01 Edexcel GCE

# **Core Mathematics C2**

## **Advanced Subsidiary**

Monday 14 January 2013 – Morning

Time: 1 hour 30 minutes

Materials required for examination Mathematical Formulae (Pink) Items included with question papers Nil

Candidates may use any calculator allowed by the regulations of the Joint Council for Qualifications. Calculators must not have the facility for symbolic algebra manipulation, differentiation or integration, or have retrievable mathematical formulae stored in them.

#### **Instructions to Candidates**

Write the name of the examining body (Edexcel), your centre number, candidate number, the unit title (Core Mathematics C2), the paper reference (6664), your surname, initials and signature.

#### **Information for Candidates**

A booklet 'Mathematical Formulae and Statistical Tables' is provided. Full marks may be obtained for answers to ALL questions. The marks for the parts of questions are shown in round brackets, e.g. (2). There are 9 questions in this question paper. The total mark for this paper is 75.

#### Advice to Candidates

You must ensure that your answers to parts of questions are clearly labelled. You must show sufficient working to make your methods clear to the Examiner. Answers without working may not gain full credit. 1. Find the first 3 terms, in ascending powers of *x*, in the binomial expansion of

 $(2-5x)^6$ .

Give each term in its simplest form.

$f(x) = ax^3 + bx^2 - 4x - 3$ , where <i>a</i> and <i>b</i> are constants.	
Given that $(x - 1)$ is a factor of $f(x)$ ,	
(a) show that $a + b = 7$ .	
Given also that, when $f(x)$ is divided by $(x + 2)$ , the remainder is 9,	(2)
(b) find the value of $a$ and the value of $b$ , showing each step in your working.	(4)
(a) Show that the predicted profit in the year 2016 is £138 915.	(1)
(b) Find the first year in which the yearly predicted profit exceeds $\pounds 200\ 000$ .	(5)
(c) Find the total predicted profit for the years 2013 to 2023 inclusive, giving your and	swer to the
	<ul> <li>Given that (x - 1) is a factor of f(x),</li> <li>(a) show that a + b = 7.</li> <li>Given also that, when f(x) is divided by (x + 2), the remainder is 9,</li> <li>(b) find the value of a and the value of b, showing each step in your working.</li> <li>A company predicts a yearly profit of £120 000 in the year 2013. The company predict yearly profit will rise each year by 5%. The predicted yearly profit forms a geometric with common ratio 1.05.</li> <li>(a) Show that the predicted profit in the year 2016 is £138 915.</li> </ul>

4. Solve, for  $0 \le x < 180^{\circ}$ ,

$$\cos(3x-10^\circ) = -0.4$$
,

giving your answers to 1 decimal place. You should show each step in your working.

(7)

(4)

5. The circle <i>C</i> has equatio	n
------------------------------------	---

$$x^2 + y^2 - 20x - 24y + 195 = 0$$

The centre of *C* is at the point *M*.

<i>(a)</i>	Find
(0)	1 1110

- (i) the coordinates of the point M,
- (ii) the radius of the circle C. (5)

*N* is the point with coordinates (25, 32).

(*b*) Find the length of the line *MN*.

The tangent to C at a point P on the circle passes through point N.

- (c) Find the length of the line NP.
- 6. Given that  $2 \log_2(x+15) \log_2 x = 6$ ,

(a) show that $x^2 - 34x + 225 = 0$ .	
	(5)
(b) Hence, or otherwise, solve the equation $2 \log_2(x+15) - \log_2 x = 6$ .	
	(2)

(2)

(2)

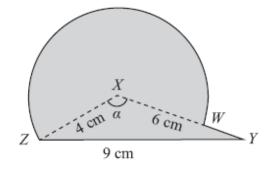

Figure 2

The triangle *XYZ* in Figure 1 has XY = 6 cm, YZ = 9 cm, ZX = 4 cm and angle  $ZXY = \alpha$ . The point *W* lies on the line *XY*.

The circular arc ZW, in Figure 1 is a major arc of the circle with centre X and radius 4 cm.

(a) Show that, to 3 significant figures,  $\alpha = 2.22$  radians.

(b) Find the area, in  $cm^2$ , of the major sector XZWX.

The region enclosed by the major arc ZW of the circle and the lines WY and YZ is shown shaded in Figure 1.

Calculate

- (c) the area of this shaded region, (3)
- (d) the perimeter ZWYZ of this shaded region.

(4)

(3)

(2)

- 8. The curve C has equation  $y = 6 3x \frac{4}{x^3}$ ,  $x \neq 0$ .
  - (a) Use calculus to show that the curve has a turning point P when  $x = \sqrt{2}$ .

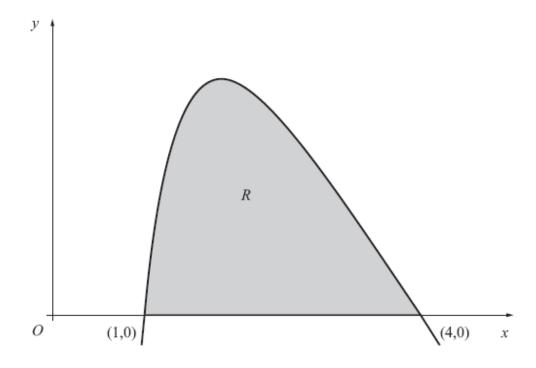

(4)

(1)

(b) Find the x-coordinate of the other turning point Q on the curve.

(c) Find  $\frac{d^2 y}{dx^2}$ . (1)

(d) Hence or otherwise, state with justification, the nature of each of these turning points P and Q.(3)

The finite region R, as shown in Figure 2, is bounded by the x-axis and the curve with equation

$$y = 27 - 2x - 9\sqrt{x} - \frac{16}{x^2}, \quad x > 0.$$

The curve crosses the x-axis at the points (1, 0) and (4, 0).

(a) Copy and complete the table below, by giving your values of y to 3 decimal places.

x	1	1.5	2	2.5	3	3.5	4	
у	0	5.866		5.210		1.856	0	
								(2)

(b) Use the trapezium rule with all the values in the completed table to find an approximate value for the area of R, giving your answer to 2 decimal places.

(4)

(c) Use integration to find the exact value for the area of *R*.

(6)

### **TOTAL FOR PAPER: 75 MARKS**

	41.2, 97.9, 161.2	B1M1A1M0A0M1A1	
	41.2, 85.5, 97.9, 142.7	B1M1A1M1A1M0A0	
	41.2, 85.5, 97.9, 161.2	B1M1A1M1A1M1A0	
	41.2, 85.5, 97.9, 142.7, 161.2	B1M1A1M1A1M1A0	

6 Way 2	$2\log(x+15) = \log(x+15)^2$		B1
	$\log(x+15)^2 = 6 + \log x$		
	$2^6 = 64 \text{ or } \log_2 64 = 6$	64 used in the correct context	B1
	$\log_2 64 + \log_2 x = \log_2 \left( 64x \right)$	Correct use of $\log a + \log b = \log ab$	M1
	$\left(x+15\right)^2 = 64x$	Removes logs correctly	M1
	$\Rightarrow x^2 + 30x + 225 = 64x$	Must see expansion of $(x+15)^2$ to score the final mark.	
	$\therefore x^2 - 34x + 225 = 0 *$	Correct completion to printed answer	A1
			(5)

6 Way 3	$2\log(x+15) = \log(x+15)^2$		B1
	$2^6 = 64 \text{ or } \log_2 64 = 6$	64 used in the correct context	B1
	$\log_2 (x+15)^2 - \log_2 x = \log_2 64$		
	$\left(x+15\right)^2 = 64x$	Correct use of $\log a + \log b = \log ab$ (implied) and removes logs correctly.	M1, M1
	$\Rightarrow x^2 + 30x + 225 = 64x$	Must see expansion of $(x+15)^2$ to score the final mark.	
	$\therefore x^2 - 34x + 225 = 0 *$	Correct completion to printed answer	A1
			(5)

6 Way 4	$2\log(x+15) = \log(x+15)^2$		B1
	$\log(x+15)^{2} - \log x = \frac{\log(x+15)^{2}}{\log x}$		MO
	$2^6 = 64 \text{ or } \log_2 64 = 6$	64 used in the correct context	B1
	$\frac{\log_2(x+15)^2}{\log x} = 6 \Longrightarrow \frac{(x+15)^2}{x} = 64$		MO
	$\Rightarrow x^2 + 30x + 225 = 64x$		
	$\therefore x^2 - 34x + 225 = 0 *$		A0
			(2/5)

6 Way 5			
	$2\log(x+15) - \log x = 2\log\left(\frac{x+15}{x}\right)$		M0
	$\log_2 \frac{\left(x+15\right)^2}{x} = 6$		B0 (first)
	$2^6 = 64 \text{ or } \log_2 64 = 6$	64 used in the correct context	B1
	$\frac{\left(x+15\right)^2}{x} = 64$		M1
	$\Rightarrow x^2 + 30x + 225 = 64x$		
	$\therefore x^2 - 34x + 225 = 0 *$	Incorrect solution	A0
			(2/5)
