1 Use an isosceles right-angled triangle to show that $\cos 45^{\circ}=\frac{1}{\sqrt{2}}$.

2 Find $\int_{1}^{2}\left(12 x^{5}+5\right) \mathrm{d} x$.
[4]
(i) Find $\sum_{k=3}^{8}\left(k^{2}-1\right)$.
(ii) State whether the sequence with $k$ th term $k^{2}-1$ is convergent or divergent, giving a reason for your answer.

4 A sector of a circle of radius 18.0 cm has arc length 43.2 cm .
(i) Find in radians the angle of the sector.
(ii) Find this angle in degrees, giving your answer to the nearest degree.

5 (i) On the same axes, sketch the graphs of $y=\cos x$ and $y=\cos 2 x$ for values of $x$ from 0 to $2 \pi$.
(ii) Describe the transformation which maps the graph of $y=\cos x$ onto the graph of $y=3 \cos x$.

6 Use calculus to find the $x$-coordinates of the turning points of the curve $y=x^{3}-6 x^{2}-15 x$.
Hence find the set of values of $x$ for which $x^{3}-6 x^{2}-15 x$ is an increasing function.

7 Show that the equation $4 \cos ^{2} \theta=4-\sin \theta$ may be written in the form

$$
\begin{equation*}
4 \sin ^{2} \theta-\sin \theta=0 \tag{5}
\end{equation*}
$$

Hence solve the equation $4 \cos ^{2} \theta=4-\sin \theta$ for $0^{\circ} \leqslant \theta \leqslant 180^{\circ}$.

8 The gradient of a curve is $3 \sqrt{x}-5$. The curve passes through the point $(4,6)$. Find the equation of the curve.

9 Simplify
(i) $10-3 \log _{a} a$,
(ii) $\frac{\log _{10} a^{5}+\log _{10} \sqrt{a}}{\log _{10} a}$.

## Section B (36 marks)

## 10 Answer part (i) of this question on the insert provided.

Ash trees grow quickly for the first years of their life, then more slowly. This table shows the height of a tree at various ages.

| Age $(t$ years $)$ | 4 | 7 | 10 | 15 | 20 | 40 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| Height $(h \mathrm{~m})$ | 4 | 9 | 12 | 17 | 19 | 26 |

The height, $h \mathrm{~m}$, of an ash tree when it is $t$ years old may be modelled by an equation of the form

$$
h=a \log _{10} t+b
$$

(i) On the insert, complete the table and plot $h$ against $\log _{10} t$, drawing by eye a line of best fit. [3]
(ii) Use your graph to find an equation for $h$ in terms of $\log _{10} t$ for this model.
(iii) Find the height of the tree at age 100 years, as predicted by this model.
(iv) Find the age of the tree when it reaches a height of 29 m , according to this model.
(v) Comment on the suitability of the model when the tree is very young.

11 (i) In a 'Make Ten’ quiz game, contestants get $£ 10$ for answering the first question correctly, then a further $£ 20$ for the second question, then a further $£ 30$ for the third, and so on, until they get a question wrong and are out of the game.
(A) Haroon answers six questions correctly. Show that he receives a total of $£ 210$.
(B) State, in a simple form, a formula for the total amount received by a contestant who answers $n$ questions correctly.

Hence find the value of $n$ for a contestant who receives $£ 10350$ from this game.
(ii) In a 'Double Your Money' quiz game, contestants get $£ 5$ for answering the first question correctly, then a further $£ 10$ for the second question, then a further $£ 20$ for the third, and so on doubling the amount for each question until they get a question wrong and are out of the game.
(A) Gary received $£ 75$ from the game. How many questions did he get right?
(B) Bethan answered 9 questions correctly. How much did she receive from the game?
(C) State a formula for the total amount received by a contestant who answers $n$ questions correctly.

Hence find the value of $n$ for a contestant in this game who receives $£ 2621435$.

## [Question 12 is printed overleaf.]

12 (i) Calculate the gradient of the chord joining the points on the curve $y=x^{2}-7$ for which $x=3$ and $x=3.1$.
(ii) Given that $\mathrm{f}(x)=x^{2}-7$, find and simplify $\frac{\mathrm{f}(3+h)-\mathrm{f}(3)}{h}$.
(iii) Use your result in part (ii) to find the gradient of $y=x^{2}-7$ at the point where $x=3$, showing your reasoning.
(iv) Find the equation of the tangent to the curve $y=x^{2}-7$ at the point where $x=3$.
(v) This tangent crosses the $x$-axis at the point $P$. The curve crosses the positive $x$-axis at the point Q . Find the distance PQ , giving your answer correct to 3 decimal places.
